

PIEZO BUZZER ORCHESTRA

For many obvious reasons, I wanted to be able to light up a room with the glorious sound of the piezo buzzer. I wanted them to be singularly addressable so I could connect them all up via ESPNow and have them buzz at the click of a button, or at intervals

I had a bunch of old esp32 c3's lying around from a previous LED project, so I started there.

It also uses some piezo buzzers, 3x AAA battery holders, and 3D Printed parts- along with wiring and programming in Arduino IDE!
